

CANDIDATE MANIFESTO

YOUR PHOTO:

YOUR NAME:

Luna Irshaid Al Taher

YOUR DEPARTMENT:

Mechanical Engineering

THE POSITION YOU ARE APPLYING FOR:

Faculty of Engineering Sciences Representative
(Open Place)

YOUR 100 WORD SUMMARY:

What would it take to represent the Faculty of Engineering Sciences? It would take skill and experience, it would need patience and responsibility, it would require someone with a goal. I believe that there is so much room for improvement in the faculty of engineering. This can be summarized as academic, and social aspects, pro-environment action, as well as communicating our issues and improvements to the university through the union. Voting for me, you will be assured that there is someone with the required, multi-cultural experience, who is communicative and responsible, promptly representing you, and the engineering faculty.

YOUR MANIFESTO:

Are you an Engineer?

Vote Luna! Here are a few simple reasons why:

- **Experience** Having been on the **student council for four years in high school** (positions: year representative, vice-president and president) I have managed to gain certain skills ranging from leadership to teamwork as well as organisation and debate skills that will assist with my work in the union. Also, having been **the faculty representative for engineering sciences last year**, I believe I have understood the full mechanism of the student union, and thus would be able to get straight to work this year.
- **Skills** Having taken part in many societies in both school and university, I was able to grow into a multi-cultural character as well as achieve certain skills such as time management, diplomacy, and understanding of responsibility which will all assist me in representing the faculty.

And, what will I be doing?

- **Academic Aspects** I will be dealing with the academic issues within the department of engineering sciences facing students; these include anything related to academics, such as timetable issues, module selection, and teaching standards.
- **Social Aspects** Increasing the sense of community and comfort within the students is quite important, this can happen through events between the faculty of engineering itself and joint events with other faculties. I will also be willing to tackle any general social issue relating the faculty with the union, in search of a suitable solution.
- **The Environment** Caring for the environment is very important, therefore, I will be encouraging the union's 'Go Green' Campaign and positively add to it.
- **Communicating with YOU!** Be sure that I'll be easy to get in touch with and speak to with faculty related topics. I will make sure that I communicate to the union all of your suggestions and concerns!

VOTE!
